BETTER TESTER

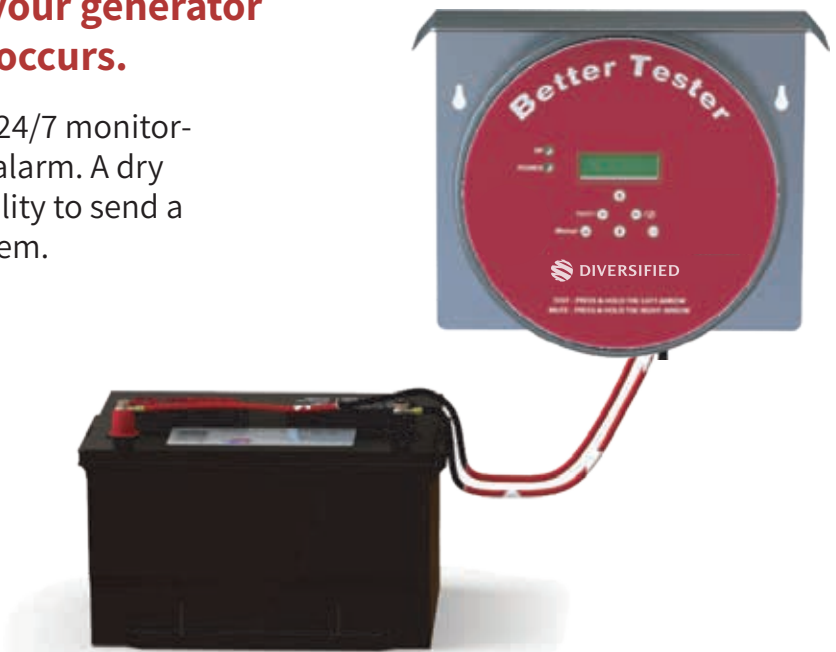

A unique solution that ensures your generator starts as soon as an emergency occurs.

If poor battery voltage is detected during 24/7 monitoring, Better Tester will activate an audible alarm. A dry contact will also activate, allowing the ability to send a signal to an external alarm or control system.

- 24/7 battery voltage monitoring
- Scheduled battery quality testing
- Alert sounds in case of battery failure

Additional features:

- Alert on the generator's water temperature
- Keeps a test history
- Dry contact allows interfacing with an additional remote alert system.
