Network Management

- Cloud-based access to controllers
- Gives multiple users simultaneous network access
- Multiple communication pathways
- Built-in Internet, telephone, and cellular connectivity
- Local communication via wired or wireless communication
- Status reports provide critical information on house functions and animal statistics

Web Application

- Full control over your farm's controllers
- Overview of houses' activities
- User customized dashboard
- Displays comparison of houses' main performance parameters

Smart Phone Application

- Fully enabled mobile control device
- Consistent look and feel with the web application
- Supports push notifications
- Enables control over multiple farms from a single login

Communication Package
Stay Connected, Stay on Top

The Munters Communication Package provides a range of products designed to enable remote farm management from a PC or mobile device with access to the Cloud. Communicator 2.0 provides you with complete access to your Munters controllers, including monitoring and control capabilities, from any device, anywhere. In addition, 24/7 alarms and event monitoring keep you updated in real-time as to what is happening on your farm. With the Communication Package, you can manage an entire farm from one computer, tablet, or smart phone.

For users who require complete web access capabilities without alarms and events monitoring, Comm-Box provides a cost-effective alternative. Comm-Box supports all access and data functionality provided by Communicator 2.0, both locally and remotely. In addition, Comm-Box can act as an add-on for users wanting to add web-access to existing Communicator units.
