

Tunnel Door:

Tighter Seal, Better Insulation

Diversified Tunnel Door, now available with upgraded, chemical-resistant materials, delivers precise, reliable long-term operation while reducing air leakage for significant energy savings.

High density extruded polystyrene insulation (XPS) for optimal thermal efficiency.

Large, 3 ribbed P-seal creates an airtight barrier to reduce air leakage and prevent pests and dust from entering.

Sturdy, properly mounted 304 stainless steel hinges include a spacer, eliminating over-compression of the bottom seal.

Doors use chemical-resistant FRP panels and trim for improved strength and durability.

Custom heights and half width doors available to fit any size rough opening.

Maintenance-free polyester strap and pipe drive system eliminates the need to adjust or replace cables.

Lightweight, interlocking design for easy installation.
