

HYDRATE YOUR BIRDS, NOT YOUR FLOORS.

The Plasson **Gray Nipple with Tray** is designed to provide maximum hydration while reducing excess litter moisture, resulting in a happier, healthier flock.

By using a tray to collect the excess water, a higher volume nipple can be used. This satisfies birds quicker and enhances feed conversion.

Water that collects within the tray is indicative of column pressure and line height, allowing you to monitor and adjust as needed. This helps prevent water from saturating your litter and maximizes resources for optimal performance and increased profits.

- Superior performance
- Increased hydration
- Better flock starts
- Improved litter conditions
- Healthier birds
- Higher quality paws
