

Nest-O-matic

The uniquely designed Diversified Nest-O-matic is poised to revolutionize the breeder industry with its no-slat design—saving up to 10 broken eggs per hen. The spacious interior of the community nest enables better air flow for drier litter and cleaner eggs, while promoting improved fertility and hatchability.

No Slats. More Eggs. Healthier Environment.

In the U.S., a single nest system with slats has been standard in breeder operations for years. However, conventional nests can stress birds and slats cause several production challenges including an increase in broken eggs, which degrades the environment, and attracts rodents and insects; leg injuries, which can increase spiking; and high maintenance requirements.

The Nest-O-matic is the first community nest without slats. It helps lower bird stress and encourages hens to lay in the nest, which means eggs have the best chance of getting to the hatchery clean and free of excess contamination for improved fertility and hatchability. By removing the slats, leg problems due to slipping are decreased, which can reduce male mortality and

possibly reduce spiking. And, hens have been shown to begin water and feed consumption within minutes of being introduced to the house.

The nest's spacious interior can accommodate up to 200 breeders per nest. Large ventilation holes promote drier litter and optimal temperatures, equating to lower ammonia levels and a healthier environment for improved animal welfare. The retractable leg design coupled with no slats maximizes scratch areas and overall living space for the birds, while decreasing maintenance demands. In addition, the innovative lifting system drastically reduces labor when cleaning out between flocks.

NEST-O-MATIC FEATURES

BENEFITS

Community nest with no slats

Saves 8 to 10 eggs per hen from being broken on slats

Spacious nest design

Gives hens ample room to move and creates a pleasant community laying environment

Large ventilation holes enable better airflow

Proper ventilation keeps litter drier and decreases ammonia for improved animal welfare

Slatless design creates more scratch area

Decreases male mortality from slat-caused leg problems, decreases spiking and promotes healthier males, promotes immediate water/feed consumption in hens

Minimal maintenance requirements

One piece removable floor mats

Quick and easy to clean for improved nest hygiene

Perforated conveyor runs under nest for automatic egg collection

Fewer dirty and contaminated eggs with no belt cross-contamination improves fertility and hatchability

Legs extend and retract without tools

Easily adjustable nests provide easy access, aiding in bird training for fewer floor eggs

Exclusive lifting system, retractable legs

Enables easy cleanout with reduced labor

NEST-O-MATIC TECHNICAL SPECIFICATIONS

- Can accommodate two rows of nests based on the length of the house
- Available in automatic, semi-automatic and manual
