

WOD 24volt Transformer for Rotem connection

Wiring for Single Solenoid

Primary - Input

(115/230VAC) continuous 110 volt power needed Black & White (110v)/Black & Orange (240v) wire

Secondary - Output (24Volt)

Blue & Brown (connect one to Rotem relay other to solenoid)
(Second wire from solenoid direct to other side of relay)

Wiring for Multiple Solenoid

Primary - Input

(115/230VAC) continuous 110 volt power needed
Black & White (110v)/Black & Orange (240v) wire

Secondary - Output (24Volt)

Blue & Brown (Use jumper wires to Rotem relays then connect it to one white wire.
Connect the other brown wire to one leg from each of the different solenoids)
(Connect 2nd wire from each solenoid direct to each programmable relay being used)
